MRI BRAIN

Part: Brain - Plain MRI

Clinical Information:

Headache / Giddiness (as provided)

Technique:

Multipplanar, multisequence MRI of the brain was performed including T1-weighted, T2-weighted, FLAIR, DWI and GRE sequences in axial, sagittal and coronal planes.

Findings:

- The cerebral hemispheres show normal signal intensity and morphology.
- No focal parenchymal lesion is identified.
- The basal ganglia, thalam, brainstem, and cerebellum appear normal.
- The ventricular system is normal in size and configuration.
- No evidence of hydrocephalus.
- No midline shift is seen.
- Diffusion-weighted images show no areas of restricted diffusion.
- No intracranial hemorrhage is noted.
- The sellar and parasellar regions are normal.
- Visualized orbits, paranasal sinuses and mastoid air cells are unremarkable.
- Major intracranial vessels show normal flow voids.

Conclusion: Normal MRI Brain.
